

The Steve Clark Team

A 9-pillar, 98-spoke content architecture built to win classic search across Hamilton County, Boone County and the north side of Indianapolis, and to be the source that ChatGPT, Perplexity, Gemini and Google AI Overviews cite when buyers and sellers ask.

FAQ SCHEMA BLOCKS
AND DATA TABLES, SITE-
WIDE

The Steve Clark Team is a founding Compass Indiana team, an IBJ Top 25 All-Star Agent Team and a RealTrends-ranked team. That is real, earned authority. None of it is reaching an AI search engine, because there is almost nothing on the site for an engine to read.

Eighteen community pages are live for Carmel, Zionsville, Westfield, Fishers, Noblesville, Whitestown, Geist, Williams Creek, Meridian-Kessler, Meridian Hills, Broad Ripple, Brownsburg, McCordsville, Fortville, Lawrence, Pike, Downtown Indy and Morris. Their combined original content is 1,218 words, an average of 68 words per community. Williams Creek, the most exclusive address in the footprint, gets 54 words. Every one of those pages then hands the rest of its screen to an IDX feed.

The clearest single finding: across those 18 pages, steveclarkteam.com serves 87 listing cards branded F.C. Tucker Company and 38 branded Compass Indiana. The team's own website is doing more than twice as much brand-building for its largest competitor as it is for its own brokerage.

This is not a criticism of the site build. It is the normal outcome of an IDX-first template that was never given editorial content to balance it. It is also the entire opportunity: the pages already exist, they already rank for the right place names, and they are one content layer away from being the best answer in the market.

What the Audit Actually Measured

Every figure below was pulled directly from the live site on August 7, 2026. No estimates.

COMMUNITY PAGE	ORIGINAL WORDS	IDX CARDS	FAQ SCHEMA	DATA TABLES
Geist	106	23	0	0
Lawrence	80	24	0	0
Downtown Indy	79	24	0	0
Brownsburg	76	24	0	0
Noblesville	75	23	0	0
Whitestown	72	24	0	0
Zionsville	68	24	0	0
Broad Ripple	67	24	0	0
Carmel	66	23	0	0
Westfield	65	24	0	0
McCordsville	65	24	0	0
Meridian Hills	62	6	0	0
Fortville	62	24	0	0
Fishers	61	24	0	0
Meridian-Kessler	58	23	0	0
Pike	57	24	0	0
Williams Creek	54	24	0	0
Morris	45	24	0	0
All 18 community pages	1,218	410	0	0

What is already right

The URL footprint is excellent. Eighteen clean community slugs, a Buyers page, a Sellers page, Compass Concierge, Bridge Loan Services, a home valuation tool and nine individual agent pages. Baseline Place, Organization and PostalAddress schema is already firing on the community pages. The structure is sound. It is the content inside it that does not exist.

What is blocking citation

No FAQ schema anywhere on the site. No data tables. One H2 per community page. A blog that has published a single placeholder post since July 2020. AI engines cite passages that directly answer a question, carry structured markup and sit next to original data. The site currently offers none of those three.

The Architecture

Nine pillars, 98 spokes, and a 10-page entity layer underneath all of it.

Each pillar is a definitive hub page. Spokes link up to their pillar and laterally to each other where a buyer would genuinely move between the two questions. The schema mix leans on FAQPage, Place, RealEstateAgent, HowTo and Dataset, the structured types that generative engines preferentially quote.

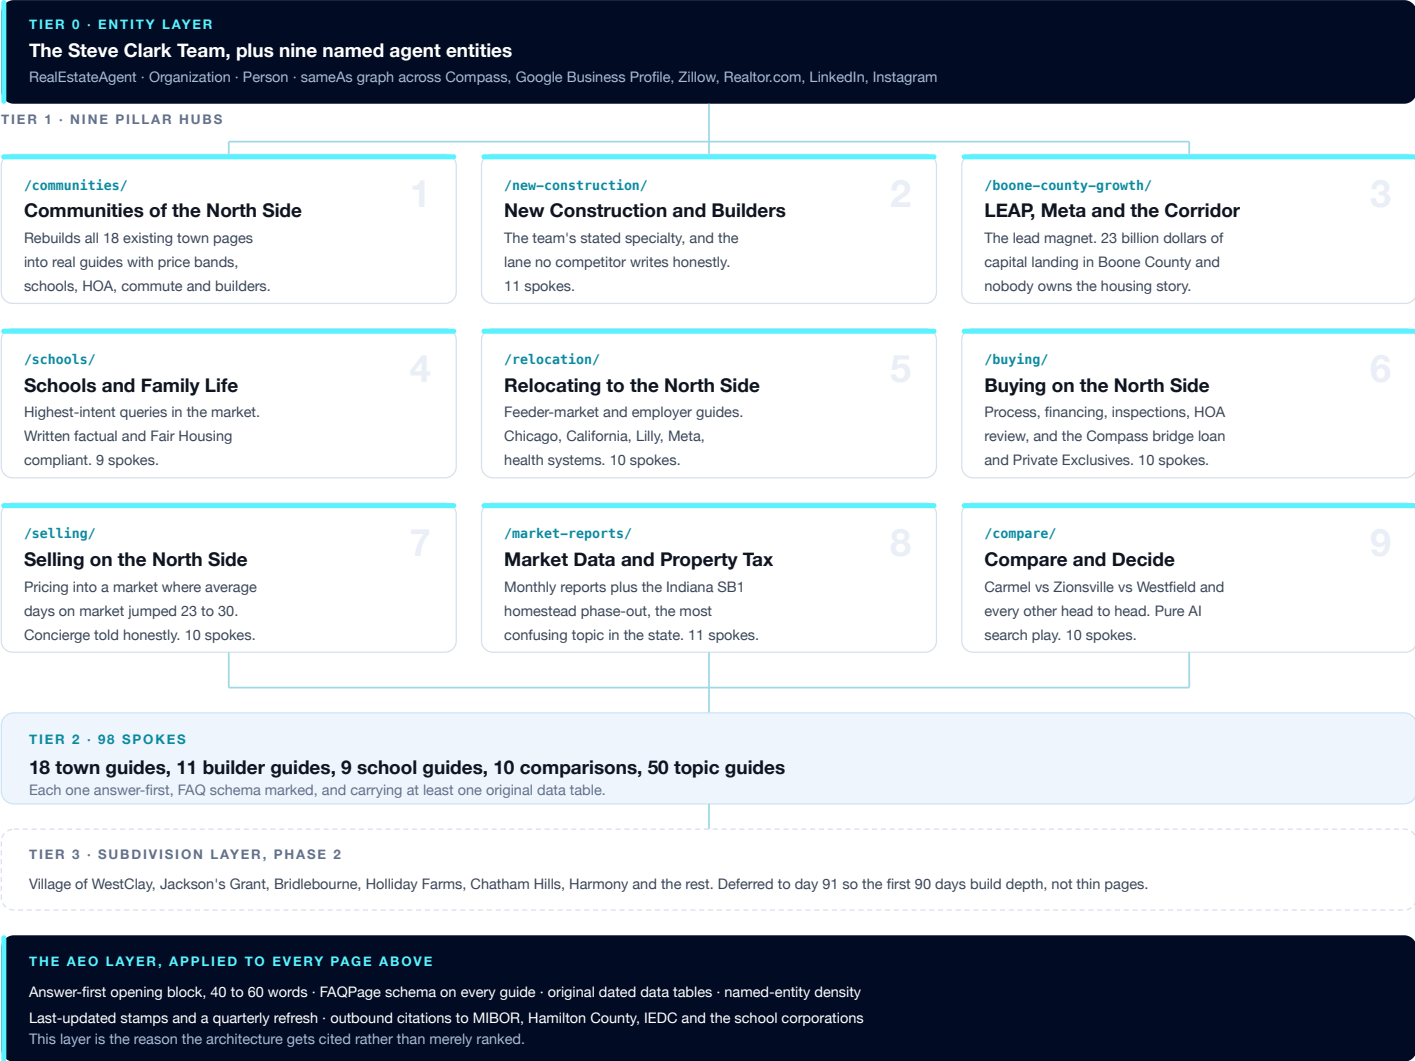

Figure 1. The full content architecture. Tier 0 establishes who the team is in a form an engine can verify. Tiers 1 through 3 build the topical surface. The AEO layer is applied to every page in every tier.

How One Pillar Works

Pillar 3 shown in full, because it is the fastest path to inbound leads.

Eli Lilly has committed more than 13 billion dollars to its Lebanon campus. Meta broke ground in February 2026 on a 10 billion dollar, 1,500-acre data center. Together that is more capital arriving in one Indiana community than in any other in the state's history, on an IEDC land assembly of roughly 9,000 acres, with a new I-65 interchange and a mixed-use village that went out for master-developer proposals in July 2026. At full build the district is projected to employ tens of thousands of people.

Every one of those people has to live somewhere, and almost all of them will ask an AI assistant where before they ask an agent. Right now no team in Central Indiana owns that answer.

Figure 2. The hub-and-spoke pattern, shown on Pillar 3. Every pillar in Figure 1 is built to this same shape.

The Nine Pillars in Detail

Each hub is a long-form resource. Spoke titles below are the working set, to be finalized with the team.

[/communities/](#)

1

Communities of the North Side

The definitive guide to every town in the footprint: price bands, schools, HOA structure, commute, builders and who each one actually fits.

18 TOWN GUIDES, REBUILT FROM THE EXISTING PAGES

- Carmel, Zionsville, Westfield, Fishers, Noblesville
- Whitestown, Geist, Williams Creek, Lebanon
- Meridian-Kessler, Meridian Hills, Broad Ripple
- Brownsburg, McCordsville, Fortville, Lawrence, Pike, Downtown Indy

[Place](#)

[BreadcrumbList](#)

[/new-construction/](#)

2

New Construction and Builder Intelligence

The honest guide to buying new in a market where new construction closed at a 544,940 dollar median in June 2026, above the 520,500 dollar county median.

11 SPOKES

- Should you bring your own agent to a builder's model home
- Builder contracts versus the Indiana purchase agreement
- Lot premiums in Hamilton County that actually hold value
- Upgrades that return at resale, and the ones that do not
- Spec homes versus to-be-built: timeline, price, room to negotiate
- How to negotiate when a builder will not move on price
- Individual builder guides, national and local
- New construction warranties in Indiana, year one to year ten
- Why you still need three inspections on a new build
- Construction loans, rate locks and builder lender incentives
- Custom builders across Hamilton and Boone counties

[HowTo](#)

[FAQPage](#)

[Article](#)

LEAP, Meta and the Growth Corridor

The lead magnet. The clearest plain-English account of what 23 billion dollars of capital does to Boone County housing.

9 SPOKES

- What the LEAP district actually is, and what it means for values
- Where to live if you work at LEAP: four towns compared
- Meta's data center campus and what it changes
- Commute times from every north-side town to the campus
- Why Boone County's median fell 4.3% while sales rose 19.6%
- Relocating to Boone County for Eli Lilly
- Buying land in the path of growth, and what to check first
- Whitestown after a decade as Indiana's fastest-growing town
- Lebanon's mixed-use village: timeline and what gets built when

[FAQPage](#)[Article](#)[Dataset](#)

Schools and Family Life

Factual, Fair Housing compliant answers to the questions buyers ask most and agents answer least in writing.

9 SPOKES

- Carmel Clay Schools
- Zionsville Community Schools
- Westfield Washington Schools
- Hamilton Southeastern Schools
- Noblesville Schools
- Brownsburg Community Schools
- Washington Township and the north-side Indy options
- Private and parochial schools across the north side
- How Indiana school boundaries, transfers and choice actually work

[FAQPage](#)[Dataset](#)[Article](#)

Relocating to the Indianapolis North Side

Feeder-market and employer-specific guides. This is the content almost nobody writes, and it converts.

10 SPOKES

- Moving to Carmel from Chicago
- A California buyer's guide to Hamilton County
- Moving from New York and the Northeast
- Moving from Ohio, Michigan and the Midwest
- Corporate relocation packages and how to use them
- Physician and healthcare recruitment relocation
- Eli Lilly and Meta employee relocation
- Buying sight-unseen from out of state
- International buyers in Central Indiana
- Moving up within the Indianapolis metro

[FAQPage](#)[HowTo](#)[Article](#)

Buying on the North Side

Everything between first search and closing table in Hamilton, Boone, Hancock and Marion counties.

10 SPOKES

- First-time buyer guide for Hamilton County
- The Indiana closing process: timeline and real costs
- How to choose a north-side real estate agent
- Financing above the conforming limit in Carmel and Zionsville
- What inspections actually catch in Central Indiana homes
- Reading an HOA packet and covenant set before you sign
- Earnest money and Indiana contract timelines
- Cash versus financed offers at 1.2 months of supply
- Compass bridge loans and buying before you sell
- Private Exclusives and Coming Soon, explained

[HowTo](#)[FAQPage](#)

Selling on the North Side

A seller playbook for a market that is still tight on supply but punishing on price.

10 SPOKES

- Best time of year to sell in Hamilton County
- How to price when average days on market went from 23 to 30
- The mispricing penalty, measured
- The pre-listing staging checklist
- Pre-listing improvements that pay back on the north side
- Compass Concierge, told honestly
- Net sheet walkthrough: what a seller actually takes home
- Selling a Geist waterfront or pool home
- Selling an estate property in Williams Creek or the Meridian corridor
- Selling a newer home into a new-construction market

[HowTo](#)[FAQPage](#)

Market Data, Property Tax and Cost of Ownership

The recency engine. Dated, sourced, indexable data that both Google and the LLMs come back for.

11 SPOKES

- Monthly Indianapolis north side market report, recurring
- Quarterly snapshots for Carmel, Zionsville, Westfield, Fishers, Noblesville
- Indiana Senate Bill 1 property tax reform, explained
- The homestead deduction phase-out timeline through 2030
- What a Hamilton County tax bill looks like in 2026
- Cost of living on the Indianapolis north side
- HOA fees by community, as a data table
- Home insurance costs in Central Indiana
- Price per square foot by town and by year
- Luxury tier report, one million dollars and above
- Year-end north side review

[Dataset](#)[Report](#)[FAQPage](#)

Compare and Decide

Head-to-head comparisons. The purest AI search play in the architecture, because comparison questions are exactly what people ask assistants.

10 SPOKES

- Carmel versus Zionsville
- Carmel versus Westfield
- Zionsville versus Westfield
- Fishers versus Noblesville
- Geist versus Morse Reservoir
- Hamilton County versus Boone County
- Carmel versus Fishers for families
- North side versus downtown Indianapolis
- Indianapolis north side versus the Chicago suburbs
- The best north-side town for every buyer type, ranked

[FAQPage](#)[ItemList](#)[Article](#)

Where the Competition Actually Stands

Measured on the live sites, August 7, 2026.

Two teams in this market are publishing seriously. Neither is publishing for AI search, and that gap is the opening.

SITE	PUBLISHING VOLUME	STRUCTURED DATA	FAQ SCHEMA	THE GAP
The Carrie Holle Group wearecarmelrealestate.com	Deep library. Neighborhood guides, named subdivision pages, lifestyle, new construction.	BlogPosting, Organization, RealEstateAgent, WebPage	0	Strong content, no answer layer. Nothing formatted for an engine to quote.
Mark Dietel Realty markdietel.com	Roughly 12 to 15 articles a month, seller-weighted.	None detected	0	High volume, zero schema, and no school or new-construction coverage at all.
The Steve Clark Team steveclarkteam.com	1,218 words across 18 community pages. One placeholder post since 2020.	Place, Organization, PostalAddress	0	Best URL structure of the three, almost no content inside it.

The honest read

The Steve Clark Team cannot out-publish The Carrie Holle Group from a standing start. She has years of a head start and a real library. Trying to win on volume is the wrong game and it would take eighteen months.

The winnable game is structure. Not one competitor in this market has a single FAQ schema block or a single original data table. Answer-first formatting, FAQ markup and dated proprietary data are what generative engines actually quote, and they are cheap to add to content that is being written anyway. That is where a team with better bones and no content beats a team with more content and no structure.

Second honest note: the IDX template is a structural problem the content program cannot fix on its own. As long as a community page pairs 68 words with 24 competitor listing cards, the page reads as a listing feed, not a resource. Rebalancing that template is a prerequisite, not a nice-to-have.

The 90-Day Plan

Two long-form assets a week plus one monthly market report. Roughly 26 published assets by day 90.

DAYS 1 TO 30, FOUNDATION

Week 1	Entity layer first. Team page and nine agent pages with RealEstateAgent, Organization and Person schema plus the full sameAs graph. This lifts everything published after it.
Week 2	Communities pillar hub, plus the Carmel and Zionsville rebuilds. Highest volume, highest intent, and the two pages most likely to be cited first.
Week 3	LEAP pillar hub, plus "What the LEAP district means for home values." This is the linkbait asset in the plan.
Week 4	Monthly market report for the north side, plus the Westfield and Fishers rebuilds.

DAYS 31 TO 60, DEPTH

Week 5	New Construction pillar hub, plus "Should you bring your own agent to a builder's model home." The single best differentiator asset the team has.
Week 6	Schools pillar hub, plus Carmel Clay and Zionsville Community school guides.
Week 7	Noblesville, Whitestown and Geist rebuilds, plus "Where to live if you work at LEAP."
Week 8	Monthly market report, plus "Builder contracts versus the Indiana purchase agreement."

DAYS 61 TO 90, THE AI SEARCH OFFENSIVE

Week 9	Compare and Decide pillar hub, plus "Carmel versus Zionsville." Comparison content is where citation share is won.
Week 10	"Carmel versus Westfield," plus the Indiana Senate Bill 1 property tax explainer.
Week 11	Relocation pillar hub, plus "Moving to Carmel from Chicago." Selling pillar hub goes up in parallel.
Week 12	Monthly market report, plus "Why Boone County's median fell while sales rose." Ninety-day review: rankings, citation count, organic leads, attributed listings.

By day 90: six of nine pillar hubs live, roughly 20 spokes published, three dated market reports indexed and the entity layer complete. That is enough density for Google to read topical authority and enough structure for the LLMs to start naming the team.

What We Need From You in This Session

The intake questionnaire did not reach us. These eight answers unblock the build. Everything above was assembled from the public record, so treat it as a first draft to correct, not a finished plan.

QUESTION 01 · BLOCKS THE ENTITY LAYER

Which production numbers do we publish everywhere?

steveclarkteam.com says 115 million dollars over the last two years and 1,200-plus families. The Compass profile says 500 million dollars in career sales and 1,500-plus families. Both may be true measured differently, but AI engines cross-check, and an inconsistency here weakens every citation. We need one set, stated one way, everywhere.

QUESTION 02 · BLOCKS NINE AUTHOR PAGES

Who owns which lane, and who stays out of public content?

Steve, Jeff, Beth, Tonya, Angelo, Lauren, Jackie, Samantha and Carly. Engines cite named people with a defined specialty far more readily than a team byline. We need a lane per person, confirmation of who can be quoted, and a note on anyone who should not be named publicly.

QUESTION 03 · SETS PILLAR WEIGHTING

Buyer or seller weighted, and which price bands?

This decides whether Pillar 6 or Pillar 7 gets built out first, and whether the community guides lead with the 400 thousand dollar tier or the estate tier.

QUESTION 04 · SIZES THE BIGGEST DIFFERENTIATOR

How much of the business is new construction, and how hard do we lean in?

Pillar 2 is the strongest opening in this market because no competitor writes about builder negotiation honestly. It is also the one place where naming builders has commercial consequences. Tell us how direct to be, and which builder relationships are off limits.

QUESTION 05 · SEQUENCES 18 TOWN GUIDES

Which communities are primary, which are secondary, which are IDX only?

Eighteen pages exist. We do not think all eighteen deserve a full guide in year one. Our working assumption is Carmel, Zionsville, Westfield, Fishers, Noblesville, Whitestown and Geist as primary. Correct us.

QUESTION 06 · DEFINES TIER 3

Which subdivisions actually matter?

Central Indiana buyers search by subdivision name, and a competitor already has pages on Village of WestClay, Jackson's Grant, Bridlebourne and Laurelwood. We need your list of the 20 to 25 that carry the most volume and the most of your business.

QUESTION 07 · IN OR OUT

Compass Concierge, bridge loans and Private Exclusives: content or not?

These are real searched questions with real intent, and you already have pages for them. We want to write them honestly, which means covering cost and tradeoffs. Confirm that is acceptable within Compass brand requirements, or tell us to leave them out.

QUESTION 08 · BLOCKS PUBLISHING ENTIRELY

Who controls the site, the analytics and the IDX template?

We need WordPress admin, Google Analytics and Google Search Console access, and we need to know who can change the community page template. The template rebalance in the honest-read section above requires whoever built the site.

ALSO USEFUL, BUT NOT BLOCKING

Feeder markets you see most often. Any employer or relocation-department relationships worth naming. Which designations each team member holds. Fair Housing and Compass compliance language you want enforced. Competitors you specifically want to outrank. Seasonality in your market. Anything you do not want us writing about.

What BLOK.co Delivers

Architecture and schema

The pillar and spoke taxonomy, the internal link graph, and schema templates for RealEstateAgent, Person, FAQPage, Place, HowTo, Dataset and BreadcrumbList.

Editorial

Two long-form assets a week, each answer-first, FAQ marked, and carrying at least one original dated data table with image direction included.

Market reports

A monthly north side report built on MIBOR data, sourced line by line. The July 2026 edition is already built and ready to publish.

Entity rebuild

The team entity and nine agent entities, with the sameAs graph reconciled across Compass, Google Business Profile, Zillow, Realtor.com and LinkedIn.

Quarterly refresh

Every published page re-dated and updated each quarter. Recency is a ranking and citation signal in both systems.

Total Search reporting

A monthly report covering classic rankings plus tracked citations in ChatGPT, Perplexity, Gemini and Google AI Overviews.

Recommended Next Steps

1. Answer the eight questions above in this session. Six of them take a sentence.
2. Approve the nine-pillar architecture and the 90-day cadence, or tell us which pillars to reorder.
3. Settle the production numbers today. Nothing in the entity layer can ship until that is one consistent set.
4. Get us site, analytics and Search Console access, and put us in touch with whoever controls the community page template.
5. Publish the July 2026 market report. It is built, sourced and ready, and it starts the recency signal immediately.
6. Set the 90-day review: rankings, AI citation count, organic leads and attributed listings.

BLOK.co Total Search · Content architecture prepared for The Steve Clark Team at Compass, August 2026.

Site audit figures measured directly from steveclarkteam.com on August 7, 2026. Market figures from the MIBOR REALTOR Association Market Insights Report for June 2026, the most recent complete month published. Mortgage rate from the Freddie Mac Primary Mortgage Market Survey, week ending July 30, 2026. LEAP and Meta figures from the Indiana Economic Development Corporation and Inside INdiana Business. Property tax provisions from Indiana Senate Bill 1, 2025 session. Competitor measurements taken from the live sites on August 7, 2026.

Team credentials, production figures and roster details are as supplied by the team and pending confirmation in this session.
